Cores needed for the same SLO: dashed = 1.5x, dotted = 1.2x; below the line = SLO met
A. extrinsic bursts: handler p90 ratio (mean of 2 trials)
latency ratio to p1 (log)
consumed cores, victim + replicas (armed window)
rep3-samecores
rep2-samecores
rep1-samecores
rep3-othernode
rep2-othernode
rep3-othercores
rep1-othernode
rep1-othercores
rep2-othercores
none
hc-iso
hc-hold
hc-bang
B. intrinsic overload: service total p90 ratio
consumed cores, victim + replicas (armed window)
rep3f-samecores (h 0.92)
hc-hold (h 0.88)
none (h 0.87)
rep1f-othernode (h 1.04)
rep1f-othercores (h 1.05)
rep3f-othernode (h 1.10)
rep2f-othernode (h 1.07)
rep2f-othercores (h 1.13)
rep3f-othercores (h 1.06)
C. mixed: service total p90 ratio (handler ratio in label)
consumed cores, victim + replicas (armed window)
none (h 1.18)
hc-hold (h 1.10)
hc-bang (h 1.04)
rep3f-othernode (h 1.39)
rep3f-othercores (h 1.62)
hcrep3-othercores (h 1.36)
hcrep3-othernode (h 1.26)
no mitigation
harvesting
replication
HC + replicas
same cores / none
other cores
other node
